

KEEPS ON DRILLING WHEN OTHERS GIVE UP

INLOK
UNMATCHED
INNERTUBE
PERFORMANCE

THE HARLSAN INLOK ROD SYSTEM CAN SIGNIFICANTLY EXTEND THE LIFE OF RC RODS RESULTING IN INCREASED PRODUCTIVITY. THE INNOVATIVE INLOK ROD MINIMISES RC INNER TUBE FAILURES AND CUTS MAINTENANCE TO KEEP DRILL STRINGS DRILLING FOR LONGER.

THE HARLSAN INLOK SYSTEM

The HARLSAN Inlok system locks RC inner tubes within the RC rod body. This stops the inner tubes from moving either up or down, or rotating inside the rod. The elimination of movement inhibits both O-ring or seal grooving of the inner tube ends, and reduces wear to the inside rod shoulder. Inner tube circlip breakages are virtually eliminated. The result is reduced maintenance and increased life from the RC rod string. Harlsan Inlok rod inner tubes are easily fitted using the Inlok installation and extraction kit.

WORKING WITH YOU

Since 1992 Harlsan has been working directly with drillers and has built a reputation for outstanding quality, service

and innovation in the manufacture and distribution of RC Drilling consumables. By investing in the latest equipment and technology, Harlsan continues to deliver the gear to keep you drilling every time.

KEY FEATURES AND BENEFITS

- Extends RC inner tube life, saving time and money.
- Reduces Inner tube movement that causes grooving and premature wear.
- Can be used with O-rings or Urethane Seals.
- Reduces O-ring tears during rod decoupling.
- Solves the problem of air bypass.
- Virtually eliminates circlip breakage.

“WE CONDUCTED INITIAL TRIALS WITH THE HARLSAN INLOK SYSTEM AND FOUND IT SO SUCCESSFUL THAT WE HAVE INSTALLED IT INTO ALL OUR RC ROD STRINGS”

Cameron Fredrickson
