

HARLSAN INLOK INNER TUBE SYSTEM

Eliminate inner tube wear and extend the life of drill rods for the same investment with the Inlok Inner Tube System. You won't achieve a greater level of safety compliance with rod handling and management than the Inlok installation and extraction kit.

The INLOK system locks RC inner tubes within the RC rod body. This stops the inner tubes from moving either up or down, or rotating inside the rod. The elimination of movement inhibits both O-ring or seal grooving of the inner tube ends, and reduces wear to the inside rod shoulder. Inner tube circlip breakages are virtually eliminated. The result is reduced maintenance and increased life from the RC rod string.

KEY FEATURES AND BENEFITS

- Safer handling
- Extends RC inner tube life, saving time and money
- Reduces inner tube movement that causes grooving and premature wear
- Can be used with O-rings or Urethane seals
- Solves the problem of air bypass
- Virtually eliminates circlip breakage

TECHNICAL SPECIFICATIONS

Sizes	4" and 4 1/2"
Lengths	3m, 5m and 6m rods and custom sizes on application
Thread Types	All major and custom threads to suit your drilling operation

**AUSTRALIAN MADE
TOUGHNESS**

PERTH OFFICE

59 Edward St, Osborne Park Western Australia 6017
Telephone: +61 8 9201 9040
